

GHG REPORT 2022

As a fast-growing company, Credence believes we have a responsibility to look for ways to reduce our emissions. Consistent with our Environment Management System (EMS – ISO 14001), we take pride in the steps we have taken to comply with Scopes 1, 2, and 3 of the Greenhouse Gas Emissions (GHG) protocol. The Credence Green Committee, which includes representatives across the company, considers ways to help protect our environment.

Credence Environmental Commitment

Credence has established an Environmental Management System to support:

- Reducing our emissions
- Limiting resource use and protecting ecosystems
- Conforming to applicable legislative, regulatory, and compliance obligations
- Continually monitoring and minimizing our Greenhouse Gas (GHG) emissions

Our main areas of emphasis include commuting, facility energy use, recycling efforts, IT operations, purchasing, and business travel.

Scope 1 — Direct Emissions

Company Facility:

Credence does not own the buildings in which our employees work, but we do look for the ways to minimize energy usage within our spaces by using motion-sensor LED lights and window blinds that help regulate the sun coming into office windows.

Company Vehicles:

We do not provide company vehicles but encourage our employees to use public transportation when possible and commute using fuel-

Scope 2 — Indirect Emissions

Electricity Usage:

The heating and cooling in the building are controlled by the building management company, but we use motion sensing LED lighting to reduce our power consumption and the restrooms employ water saving features.

In the office, employees have access to filtered water, reusable cups, and coffee machines. There are dedicated receptacles for office waste recycling including paper, aluminum, cardboard, and

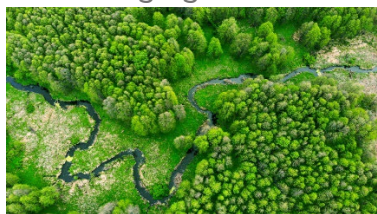

Scope 3 — Indirect Emissions

Business Travel:

We have implemented a hybrid work schedule and state of the art video conferencing systems to allow employees to meet easily and telework some days. These changes allow us to reduce emissions without compromising on meeting our customers' needs.

efficient vehicles. Many of our office spaces have electrical vehicle charging stations.

plastics. Complying with NIST SP 800-171 Control MP. L1-3.8.3, Credence uses a certified local vendor to dispose of and recycle computers, printer equipment, and other devices. Networked copy machines default to two-sided printing to reduce paper use, and we ensure that copy machine toner cartridges are returned/recycled and reused.

Environmental Stewardship

We are improving our operations in the areas of greenhouse gas emissions, water use, and waste management.

Greenhouse Gas Emissions

We currently measure our Scope 1 and Scope 2 greenhouse gas (GHG) emissions annually.

Emissions	2020	2021	2022
Scope 1	2,960.12	3,621.79	9,054.48
Scope 2	15.92	5.85	9.14
Total Emissions (in Mt)	2,976.04	3,627.64	9,063.62
